

NEWSLETTER BUILDER

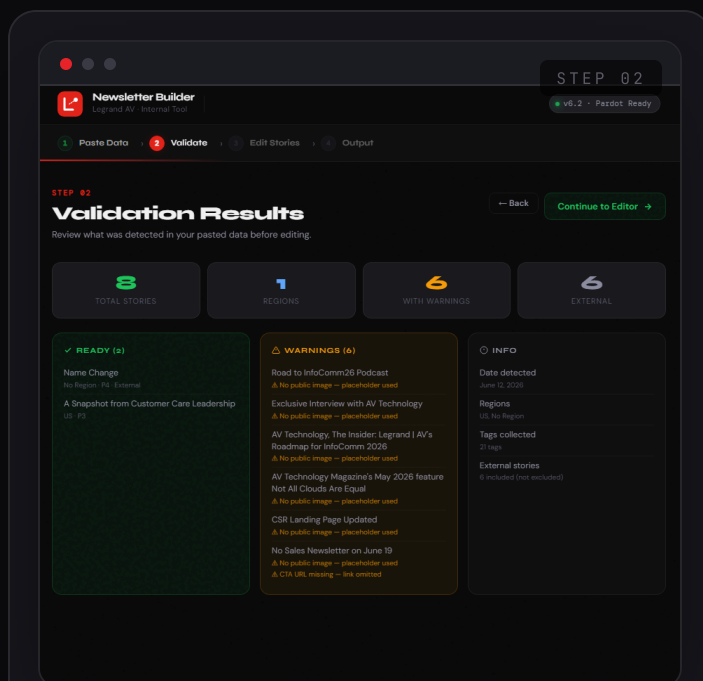

ONE PASTE → ONE NEWSLETTER

From SharePoint rows to a send-ready sales newsletter in four steps — no hand-built HTML, no copy-paste formatting cleanup.

01 PASTE

Copy rows straight out of the SharePoint Excel sheet and drop them in. All 17 columns, multiline cells and region dividers are parsed automatically.

02 VALIDATE

Every story is checked before you touch it. Missing images, absent CTA links and region gaps are flagged in seconds, not after the send.
